May / June (3) 185–284
July / August (4) 285–382
September / October (5) 383–486
November / December (6) 487–614

SUBJECT INDEX

Aggregate photoreceptors,
hole photogeneration in dual-layer, 1
Analysis,
of electrostatic latent image blurring, 322
of the mixing conditions of a toner dispersion, 453
MTF, of papers, 19
of skin color, reproduction on CRT display and hardcopy, 422
Analytical electron microscopy,
study of (S + Au)-sensitized AgBr microcrystals, 189
Analytical methods
color gamut representations, 516
MTF analysis of papers, 19
transform coding of reflectance spectra, 543
visualization of droplet ejection in thermal ink jets, 400
velocities for a continuous fluid jet, 405
Antifoggants,
bromine elimination of silver halide fog centers, 117
Atomic force microscopy,
cyanine dye J-aggregates in AgBr microcrystals, 111
determination of tabular silver bromide grains, 185
Azidovinyl compounds,
photo-rearrangement of, 50
β-radiation of silver bromide,
dispersion of latent image specks, 64
Benzothiazoles,
for bromine elimination of silver halide fog centers, 117
Book Reviews
Coating and Drying Defects: Troubleshooting Operating Problems, Edgar B. Gutoff, Edward D. Cohen and Gerald I. Kheboian, 180
George Eastman: A Biography, Elizabeth Brayer, 376
Photographic Sensitivity, Theory and Mechanisms, Tadaaki Tani, 281
Cell image segmentation,
morphological, of textured cell images, 265
Charge control agents,
influence of, on toner charging, 472
Charge generation,
in dual-layer aggregate photoreceptors, 1
ghost formation in a nonmagnetic single-component process, 359
Charge generation layers,
new polymorph of hydroxygallium phthalocyanine, 249
Charge mobility,
relation between disorder and a field-dependent mobility, 291
Charge transport,
bipolar transport in molecularly doped polymers, 310
dark injection as a probe of interfacial processes , 318
molecularly doped polymer containing a bifunctional dopant molecule, 245
titanyl phthalocyanine pigment dispersed in binder polymer, 171
Chemical sensitization,
hole removal in high-pH-induced, reduction-sensitized silver bromide grains, 576
study of (S + Au)-sensitized AgBr microcrystals, 189
Color holography,
recorded in a panchromatic ultrahigh-resolution single-layer silver halide emulsion, 134
Color images,
naturalness and image quality: saturation and lightness variation, 487
quantization and dithering method, 502
Colorimetry,
analysis of skin color reproduction on CRT display and hardcopy, 422
Color printing,
clay-cationic dye intercalation to image fixation, 275
dichromatic reflection models for rendering object surfaces, 549
digital photography, 556
laser dye thermal transfer, 412
photo-realistic ink-jet printing through dynamic spot size control, 390
requirements of an ink-jet phase-change ink , 386
Color measurement,
dichromatic reflection models for rendering object surfaces, 549
Color reproduction,
analysis of skin color reproduction on CRT display and hardcopy, 422
color gamut representations, 516
differences based on visual attention, 522
of electronic endoscopes, 494
encoding format compatible with the conventional tristimulus model, 510
limits of halftone printing with and without the paper spread function, 239
model-based improvement of S-video printing, 30
pyramids for image processing, 535
transform coding, using smooth basis vectors, 543
Color stereolithography,
method of 3-D color imaging, 42
Color xerography,
gloss preferences for, 158
modulation transfer function for development, 369
Conductive developers,
xerographic response of an aging, 347

Crystal growth,
enhanced understanding of silver halide tabular-grain, 79
formation of the light-sensitive phases in thermally developed photomaterials, 104
rate and mechanism, of twinned tabular grains of silver bromide, 202
of silver halide tabular crystals, 77
Crystal structure,
influence of the photosensitive silver halide/silver carboxylate, 417
Cyanine dyes,
J-aggregates in AgBr microcrystals, 111
photographic performance, electrochemical properties, and aggregation behavior, 220
Desensitization,
photographic performance, electrochemical properties, and aggregation behavior, 220
Developers,
conductive properties of two-component xerographic developer materials, 334
simulation of toner particle motion, 372
Development,
dual-component magnetic brush development, 354
effects of Q/M and M/A on a nonmagnetic mono-component contact, 364
forming high-contrast direct-positive images, 70
influence of the photosensitive silver halide/silver carboxylate, 417
latent image centers in chemically sensitized emulsions, 591
modulation transfer function for, 369
of photothermographic media, 568
Digital photography,
and color printing, 556
Direct-positive emulsion,
forming high-contrast direct-positive images, 70
Dopants,
bipolar transport in molecularly doped polymers, 310
DEH-doped polycarbonate, hole mobilities in, 299
hole transport in polysilane films, 304
molecularly doped polymer containing a bifunctional dopant molecule, 245
Dry silver technology,
influence of preparation conditions, silver halide/silver carboxylate, 417
morphological regularities in the formation of silver halides, 85
Electrography,
degradation due to surface lateral conduction, 431
Electrophoretic imaging,
ELPHI, a new approach to, 14
Electrophotography,
analysis of electrostatic latent image blurring, 322
analysis of the mixing conditions of a toner dispersion, 453
bipolar transport in molecularly doped polymers, 310
chatter vibration of a cleaner blade, 8
conductive properties of two-component xerographic developer materials, 334
dark injection as a probe of interfacial processes , 318
degradation due to surface lateral conduction, 431
description of liquid immersion development, 441
dual-component magnetic brush development, 354
effect of paper properties of fusing fix, 175
effects of Q/M and M/A on a nonmagnetic mono-component contact, 364
electron-transporting polymers, for use as N-type organic photoreceptors, 164
ghost formation in a nonmagnetic single-component process, 359
hole photogeneration in dual-layer aggregate photoreceptors, 1
hole transport in polysilane films, 304
influence of toner particle shape and size on electrophotographic image quality, 436
influence of, on toner charging, 472
internal release agents for electrophotographic toners, 462
modulation transfer function for development, 369
molecularly doped polymer containing a bifunctional dopant molecule, 245
photoconductor implications in digital electrophotography, 327
relation between disorder and a field-dependent mobility, 291
simulation of toner particle motion, 372
titanyl phthalocyanine pigment dispersed in binder polymer, 171
transport of carriers in magnetic brush development process of electrophotography, 168
xerographic response of an aging conductive developer, 347
xerographic transfer and charging by means of the piezoelectric effect, 285
Electronic color imaging,
encoding format compatible with the conventional tristimulus model, 510
digital photography and color printing, 556
ELPHI,
electrophoretic imaging, 14
Extrusion,
analysis of the mixing conditions of a toner dispersion, 453
Ferroelectric polymers,
xerographic transfer and charging by means of the piezoelectric effect, 285
Fluids,
significance of inertance and resistance in fluidics, 396
velocities for a continous fluid jet, 405
Fusing fix,
effect of paper properties of, 175
Halftone color printing,
limits of halftone printing with and without the paper spread function, 239
Halftone images,
MTF analysis of papers, 19
Halftone printing,
modeling the Yule-Nielsen halftone effect, 233
High contrast,
forming, direct-positive images, 70
Hole mobility,
in DEH-doped polycarbonate, 299
Hole transport,
in polysilane films, 304
Holography,
recorded in a panchromatic ultrahigh-resolution single-layer silver halide emulsion, 134
Image analysis,
color gamut representations, 516
Image evaluation,
gloss preferences for color xerographic prints, 158
Image morphology,
segmentation of textured cell images, 265
Image perception,
naturalness and image quality: saturation and lightness variation, 487
Image processing,

color image differences and visual attention, 522
color pyramids for, 535
model-based improvement, of S-video printing, 30
quantization and dithering method, 502
Image quality,
analysis of electrostatic latent image blurring, 322
degradation, due to surface lateral conduction, 431
ghost formation in a nonmagnetic single-component process, 359
improved color reproduction of electronic endoscopes, 494
influence of toner particle shape and size on electrophotographic image quality, 436
naturalness and image quality: saturation and lightness variation, 487
rapid drying and low feathering in a plain paper ink-jet printer, 26
transform coding of reflectance spectra, 543
Image restoration,
technique for the limited-angle problem in computer tomography, 254
Image stability,
clay-cationic dye intercalation for image fixation, 275
Ink-jet inks,
requirements of an ink-jet phase-change ink, 386
Ink-jet printers,
rapid drying and low feathering in a plain paper, 26
Ink-jet systems,
photo-realistic ink-jet printing through dynamic spot size control, 390
significance of inertance and resistance in fluidics, 396
velocities for a continuous fluid jet, 405
visualization of droplet ejection in thermal ink jets, 400
In Memoriam
George T. Eaton, (1) iii
Jordan Malinowski, (2) iii
Heinz Nitka, (4) iii
Interfacial processes
dark injection as a probe of, 318
Lasers
laser dye thermal transfer, 412
Latent image
degradation, due to surface lateral conduction, 431
photohole-induced bleaching in AgBr emulsions, 582
Latent image distribution
dispersion of, by β-radiation of sulfur-sensitized emulsions, 64
Sabattier effect in internally sensitive emulsions, 229
Latent image formation
mechanism of, 94
Light scattering
MTF analysis of papers, 19
Liquid immersion development
description of, for electrostatic imaging, 441
Magnetic carriers
transport of carriers in magnetic brush development process of electrophotography, 168
Medical imaging
improved color reproduction of electronic endoscopes, 494
Microscopy,
cyanine dye J-aggregates in AgBr microcrystals, 111
Modulation transfer function,
analysis of papers, 19
for development, 369
Molecularly doped polymers,
DEH-doped polycarbonate, hole mobilities in, 299
relation between disorder and field-dependent mobility, 291
Monocomponent development
effects of Q/M and M/A on a nonmagnetic monocomponent contact, 364
Morphological segmentation
of textured cell images, 265
Multispectral encoding
encoding format compatible with the conventional tristimulus model, 510
Niépce
study of process and invention by, 123
Non-impact printing
digital photography and color printing, 556
Organic photoconductors
effects of Q/M and M/A on a nonmagnetic monocomponent contact, 364
photoconductor implications in digital electrophotography, 327
Paper properties
effect on fusing fix, 175
limits of halftone printing with and without the paper spread function, 239
modeling the Yule-Nielsen halftone effect, 233
Phase-change inks
requirements of an ink-jet phase-change ink , 386
Photochromism
bleaching mechanism of vacuum-deposited AgBr films, 155
Photoengraving
study of process and invention by Niépce, 123
Photographic process
efficiency of electron transfer, 56
hole removal in high-pH-induced reduction sensitization, 576
photohole-induced bleaching of latent image centers in AgBr emulsions, 582
Photoreceptors,
analysis of electrostatic latent image blurring, 322
electron-transporting polymers, for use as N-type organic photoreceptors, 164
hole photogeneration in dual-layer aggregate, 1
new polymorph of hydroxygallium phthalocyanine, 249
Photosensitive materials
based on photo-rearrangement of azidovinyl and azirine compounds, 50
study of process and invention by Niépce, 123
Photothermographic processes,
formation of the light-sensitive phases in thermally developed photomaterials, 104
mechanism of latent image formation, 94
mechanism of photothermographic development, 568
Phthalocyanines
new polymorph of hydroxygallium phthalocyanine, 249
titanyl phthalocyanine pigment dispersed in binder polymer, 171
Piezoelectric effect
xerographic transfer and charging by means of, 285
Plain paper copiers
rapid drying and low feathering in, 26
Polymer elongation,
hole transport in polysilane films, 304
Polymer imaging
photo-rearrangement of azidovinyl and azirine compounds, 50
Polymers,
bipolar transport in molecularly doped, 310
electron-transporting, for use as N-type organic photoreceptors, 164
rapid prototyping materials rheology, 147

Polysilane photoconductors,
hole transport in polysilane films, 304
Printheads
significance of inertance and resistance in fluidics, 396
Printing
ELPHI, a new approach to electrophoretic imaging, 14
Printing plates
materials based on photo-rearrangement of azido-vinyl and azirine compounds, 50
Quantum yield
efficiency of electron transfer, 56
Rapid prototyping
materials rheology, 147
a method of 3-D color imaging, 42
Reciprocity failure
photoconductor implications in digital electrophotography, 327
Reflection models
dichromatic, for rendering object surfaces, 549
Resolution
color pyramids for image processing, 535
Sabattier effect
in internally sensitive emulsions, 229
Sensitization,
photographic performance, electrochemical properties, and aggregation behavior, 220
Silver bromide,
bleaching mechanism of vacuum-deposited AgBr films, 155
bromine elimination of silver halide fog centers, 117
determination of tabular silver bromide grains, 185
hole removal in high-pH-induced, reduction-sensitized, 576
morphological regularities in the formation of, 85
photohole-induced bleaching of latent image centers in, 582
rate and mechanism, growth of twinned tabular grains of, 202
Silver carboxylates,
formation of the light-sensitive phases in thermally developed photomaterials, 104
mechanism of latent image formation, 94
morphological regularities in silver halides during halidization of, 85
Silver clusters
study of (S + Au)-sensitized AgBr microcrystals, 189
Silver halide
enhanced understanding of tabular grain, 79
growth mechanism of silver halide tabular crystals, 77
Silver halide emulsions,
cyanine dye J-aggregates in AgBr microcrystals, 111
dispersion of latent image specks formed by β-radiation, 64
hologram recorded in a panchromatic ultrahigh-resolution single-layer, 134
photographic performance, electrochemical properties, and aggregation behavior, 220
Sabattier effect in internally sensitive, 229
Sinogram restoration
technique for the limited-angle problem in computer tomography, 254
Spectral sensitization
efficiency of electron transfer, 56
Stereolithography
a method of 3-D color imaging, 42
Sulfur sensitization
dispersion of latent image specks by β-radiation, 64
Surface properties
internal release agents for electrophotographic toners,462
Tabular grains
determination of tabular silver bromide grains, 185
enhanced understanding of silver halide tabular-grain, 79
growth mechanism of silver halide tabular crystals, 77
rate and mechanism, of twinned tabular grains of silver bromide, 202
Thermal imaging,
development of photothermographic media, 568
photosensitive silver halide/silver carboxylate preparation conditions, 417
Thermal transfer
laser dye thermal transfer, 412
Thermal transfer printing
clay-cationic dye intercalation in image fixation, 275
Three-dimensional images
a method of 3-D color imaging, 42
rapid prototyping materials rheology, 147
Tomography
technique for the limited-angle problem in computer tomography, 254
Tone reproduction
photo-realistic ink-jet printing through dynamic spot size control, 390
Toner charge,
influence of, 472
Toner models
dual-component magnetic brush development, 354
Toners,
analysis of the mixing conditions of a toner dispersion, 453
conductive properties of two-component xerographic developer materials, 334
influence of toner particle shape and size on electrophotographic image quality, 436
internal release agents for electrophotographic toners, 462
simulation of toner particle motion, 372
Tribocharging,
ghost formation in a nonmagnetic single-component process, 359
influence of, on toner charging, 472
Ultrarapid microscopy,
visualization of droplet ejection in thermal ink jets, 400
Vibration effects,
chatter vibration of a cleaner blade, 8
Video printing
model-based improvement of S-video printing, 30
Visual perception
differences based on visual attention, 522
quantization and dithering method, 502
Xerographic materials
response of an aging conductive developer, 347
Xerography
gloss preferences for color xerographic prints, 158
Yule-Nielsen effect
modeling the halftone effect, 233
